

Novel high throughput and economical Human Mitochondrial Sequencing now at Genotypic

Applications

- Determine evolutionary relationships
- Classify populations into haplotypes
- Detect mitochondria mediated maternally inherited diseases
- Study human migration patterns
- Detect Mitochondria related metabolic abnormalities

Genotypic Offers:

- Avail Genotypic service from Sequencing Mitochondria to data analysis even from ancient degraded samples
- User friendly excel files of sequencing data for Interpretation
- Free extended support for processing unique samples
- Economical & high-throughput sequencing Sequence multiple samples in the same run
- Confidential data transfer
- Custom services available for hybrid analysis using data from different NGS platforms
