

Revolutionize Your NGS Data Analysis

Simplify, Streamline, and Scale

Commander NGS Software provides an intuitive and powerful platform to handle your Next-Generation Sequencing (NGS) data from start to finish. Designed for researchers and labs, our software is tailored to your needs—whether you're working with whole genomes, RNA-Seq, exomes, or plasmids.

Key Features:

- **User-Friendly Interface**
Intuitive workflows that require no advanced programming skills.
- **30+ Tools across 10+ workflows for comprehensive analysis**
Support for WGS, RNA-Seq, exomes, targeted gene panels, plasmids, and more for data derived from major sequencing platforms.
- **Data Management & Visualization**
Easily manage, filter, and export large datasets with built-in visualization tools for high-quality actionable reports.
- **Customizable Pipelines**
Tailored analysis workflows for research and academic projects.

Who Can Benefit?

Academic and
research institutions
&
Biotech companies

Need a Demonstration? Schedule a live demo with our team of experts and explore how we can streamline your NGS workflows, improve accuracy, and save time.
